

To link to a web site in a forum post, begin by clicking on the **Add a new discussion** link.

Before you begin entering text, click on the **Use advanced editor** link in the lower right corner. Doing so will open an HTML editor in your textbox. (If you enter text and then open the editor, your text will be deleted!)

Type in whatever information you intend to share in the textbox, including a reference to the destination website.

Select the related text, then click on the **Insert/edit link** icon in the toolbar.

In the insert link dialogue box, paste the **Link URL** (using Ctrl + V) in the field provided. Use the pull-down menu in the **Target** field to select **Open in new window**. Click on **Insert** to complete the linking process, then click on **Post to forum** when you are ready to submit your post.
