

Add a page to your site in just a few steps!

1. To add a page to your classic Google site, click on the **Create page** plus sign.

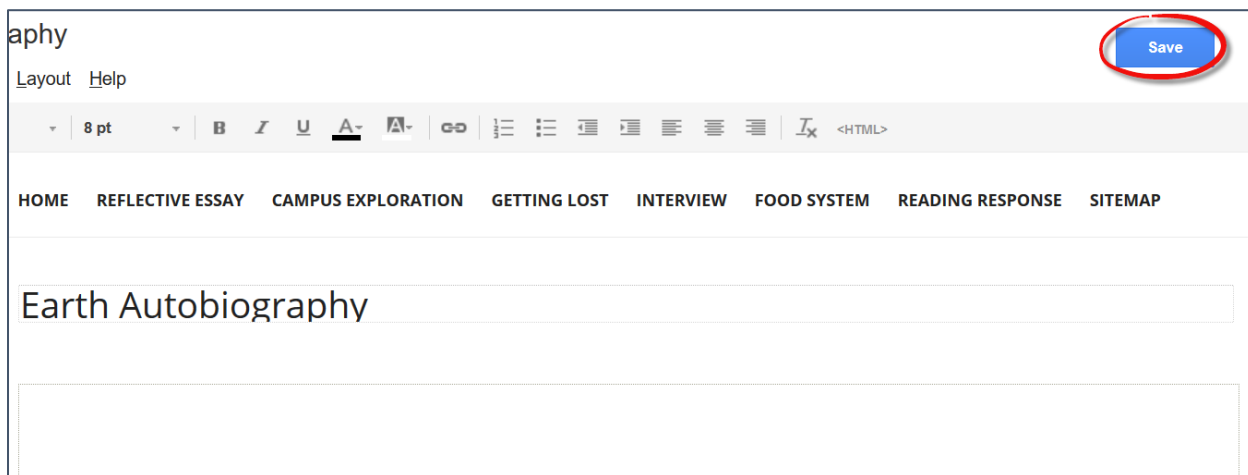

2. **Name your page**, then click on **Create**.

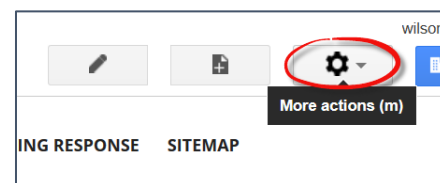

3. After the page has been created, click on **Save**. (You can edit it later!)

4. Add the page to your navigation by following [these instructions](#).

Bonus Tip: Remove Comments Link

By default, pages are created with commenting enabled. Comments can only be made on site pages by other editors, so there's no need to have comments enabled for your pages. To turn this feature off, click on the **More actions** icon, then select **Page settings** (see image next page).

In the **Page Settings** page, uncheck the **Allow comments** box, then click on **Save**.
